## 2 ISOLATED OUTPUTS SIGNAL ISOLATOR

This instrument receives DC voltage and current as input signal and provides conversion output in state that the input & output is separated completely. Especially, input & output has built in photo-coupler and power, input & output have built in 3 way isolation circuit separated by transformer.

This is a high accurate converter which is the most compatible to protection of impulse noise, high peak voltage required from isolation with field instrument, computer interface, etc. Especially, it is advantageous to construct loop as that the input & output is separated completely and is isolated between 2 outputs.
